Dear Sudhakavya Bodapati Venkata:

I am writing to ask whether you would be willing to review the following submission to ACM Transactions on Computing for Healthcare:

Data-centric Patient Work along the Medical Care Trajectory: Unpacking Current Practices with Medical Records

I believe that your expertise in the area makes you extremely well suited as a referee for this paper. I would greatly appreciate your agreeing to this review. The abstract of the paper can be found below.

Should you agree to this assignment, you will be notified via email about how to access the manuscript in ScholarOne Manuscripts, the online manuscript submission and review system. The referee instructions can be found at <https://acmhealth.acm.org/reviewers.cfm>.

Please click on one of the links below to decline or accept my invitation.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/acmhealth?URL_MASK=8aae1141058a4903a01738a69f1669cc

Declined: https://mc.manuscriptcentral.com/acmhealth?URL_MASK=9112474d1a4f4d62ab1c36e5cac6c740

Thank you very much for considering this request.

Sincerely,

Michael Beigl
ACM Transactions on Computing for Healthcare Editorial Office

MANUSCRIPT DETAILS

TITLE: Data-centric Patient Work along the Medical Care Trajectory: Unpacking Current Practices with Medical Records

ABSTRACT: With health policies in the U.S. now enabling patients greater access to the data and information in their medical records, patients are more empowered to participate actively in their healthcare. In this study, we conducted semi-structured interviews with 20 diverse U.S. adults to understand patients' current practices with their medical records. We identified two main themes (1) patient work to achieve goals was supported by medical record access throughout the medical care trajectory and (2) patient work caused by insufficient infrastructure for medical record access and sharing. Based on our findings, we recommend that technologies for viewing and using medical records better support integration, reflection, and action activities such as integrating medical records from multiple healthcare organizations and self-tracked data, comparing trends of past and present medical records, and benchmarking progress toward health goals. Furthermore, we discuss potential safeguards that could be considered for more regular use of medical records.

REVIEW DUE DATE: 02-May-2026Beigl
